

ABSTRACT

The invention concerns a composition comprising, in a cosmetically acceptable aqueous medium, at least 0.05 wt.% relative to the composition total weight, one or several water soluble organic silicon compounds, having one, two or three silicon atoms, at least a basic chemical function and at least two hydroxyl groups or capable of being hydrolysed per molecule, said organic silicon compounds being partly neutralised by a neutralising agent, selected among sulphuric acid, sulphuric acid salts and mixtures thereof. The invention is applicable to hairstyling compositions.
